

**Amendments to Specification**

On page 1 in Line 5, after the Title of the Invention insert:

**Cross Reference to Related Applications**

This application is a continuation of Application No. 010/600,632, filed June 20, 2003, now U.S. Patent No. 6,558,111, which is a continuation of Application No. 09/695,395, filed October 24, 2000.

On page 10, line 9, please amend the specification as follows:

Gas flow to the pneumatic conditioning membrane may be supplied as air or an inert gas by a compressor, liquefied gas storage facility, or another source of compressed gas 20. If a compressor is used, the compressors may be fixed or portable, and may be located at the unloading platform or a large central location at an unloading facility.

On page 12, line 5, please amend the specification as follows:

Air or gas service to the pneumatic conditioning membrane may be supplied through a service port on the manifold. This service port 22 may be placed at any convenient location on the manifold.
